POWERPLATFORM STRATEGY

Platform Business Use Cases

Platform Business Use Cases

This document provides an enterprise-grade framework for designing and scaling Power Platform solutions across applications, workflows, and data systems.

This document provides an enterprise-grade framework for designing and scaling Power Platform solutions across applications, workflows, and data systems.

This document provides an enterprise-grade framework for designing and scaling Power Platform solutions across applications, workflows, and data systems.

Execution Layer 1

Each layer aligns applications, data, and workflows for consistent execution.

The framework ensures scalability, governance, and performance across environments.

- Align applications with workflows
- Ensure structured data models
- Implement automation
- Maintain governance and security
- Optimize continuously

Execution Layer 2

Each layer aligns applications, data, and workflows for consistent execution.

The framework ensures scalability, governance, and performance across environments.

- Align applications with workflows
- Ensure structured data models
- Implement automation
- Maintain governance and security
- Optimize continuously

Execution Layer 3

Each layer aligns applications, data, and workflows for consistent execution.

The framework ensures scalability, governance, and performance across environments.

- Align applications with workflows
- Ensure structured data models
- Implement automation
- Maintain governance and security
- Optimize continuously

Execution Layer 4

Each layer aligns applications, data, and workflows for consistent execution.

The framework ensures scalability, governance, and performance across environments.

- Align applications with workflows
- Ensure structured data models
- Implement automation
- Maintain governance and security
- Optimize continuously

Execution Layer 5

Each layer aligns applications, data, and workflows for consistent execution.

The framework ensures scalability, governance, and performance across environments.

- Align applications with workflows
- Ensure structured data models
- Implement automation
- Maintain governance and security
- Optimize continuously

Execution Layer 6

Each layer aligns applications, data, and workflows for consistent execution.

The framework ensures scalability, governance, and performance across environments.

- Align applications with workflows
- Ensure structured data models
- Implement automation
- Maintain governance and security
- Optimize continuously

Execution Layer 7

Each layer aligns applications, data, and workflows for consistent execution.

The framework ensures scalability, governance, and performance across environments.

- Align applications with workflows
- Ensure structured data models
- Implement automation
- Maintain governance and security
- Optimize continuously

A structured Power Platform approach ensures scalable and reliable systems.
